

What a Crowwe partner earns

You hold a territory – one local government area, or one state. You bring people onto Crowwe. You are paid for every one of them who actually starts using it. This is exactly how much, and exactly what has to happen first.

₦500

THEY FUND

From their own bank or card, in a single deposit.

₦100

THEY SPEND

Any transaction at all, after funding.

₦50

YOU EARN

Paid into your Crowwe wallet, automatically.

01 Start to finish

Eight steps, from applying to money arriving in your wallet.

1

Open a Crowwe account

Do this first. Your earnings are paid into a real Crowwe wallet, so you need one before you can be approved – it turns approval into a single step instead of two.

2

Apply for your territory

Go to crowwe.net/partners. No account needed to see the form. You choose **one local government area** or **one whole state**, and tell Crowwe which markets, associations or groups you already work with.

That last answer is what decides it. Territories go to one partner each.

3

Crowwe calls you

Give a phone number you actually answer – the review happens by phone, and

there is no email follow-up.

4

You receive your code and link

On approval you are emailed two things that do the same job in different places: a short **referral code** like `LAGIKJ9`, and a **join link** like `crowwe.net/join?ref=LAGIKJ9`.

They also appear on your own Crowwe profile, so you always have them.

5

Share both, every time

Use the **link** on WhatsApp, SMS and social posts. Use the **code** on printed cards, banners, and when you are standing beside someone helping them sign up.

This is the one that costs partners money. On a phone, tapping a link opens the browser, not the Crowwe app. Anyone signing up inside the app has to type your code – so never give out the link alone.

6

They enter your code during signup

The field is on the **last step** of signup, marked "Referral code (optional)". Case and dashes do not matter – `lag-ikj9` and `LAGIKJ9` are the same code.

The code must go in before they add money. If someone funds their wallet first and enters your code afterwards, it is refused and you earn nothing for that person – permanently. Get the code in while you are still with them.

7

They fund ₦500 and then use it

Funding has to come from **outside Crowwe** – their bank or their card. Money another Crowwe user sends them does not count.

Then any transaction of ₦100 or more: a transfer, airtime, data, a bill, or a withdrawal. Anything on Crowwe counts.

8

₦50 lands in your wallet

Automatically, the moment both conditions are met. No claim form, no waiting period, no approval step. Withdraw it like any other money in your Crowwe wallet.

Once per person, for life. If they go on to fund fifty more times, you earn ₦50 in total for them.

02 **What that adds up to**

Tier 1 pays ₦50 per activated person. Every figure below is that one number multiplied out – there is nothing else in it.

PEOPLE ACTIVATED	YOU EARN	WHAT IT REPRESENTS
10	₦500	A first week of steady work
25	₦1,250	One good market day
50	₦2,500	Halfway to Tier 2
100	₦5,000	Tier 2 unlocks
250	₦12,500	A well-worked LGA
500	₦25,000	A market association onboarded
1,000	₦50,000	A state partner at scale

These are cumulative totals, not monthly. Each person pays you once. Reaching ₦25,000 means five hundred different people funded and used Crowwe because of you – it is not five hundred people paying you repeatedly.

Tier 2, below, is the part that recurs.

03 **What it actually takes**

The honest version, from Crowwe's own records rather than a projection.

A signup is not an activation. Someone has to reach for their own money and then use the

app. Across every account Crowwe has ever had, or the people who funded ₦500 or more, roughly 6 in 10 went on to transact and would have earned their partner ₦50.

YOUR TARGET	PEOPLE WHO MUST FUND ₦500	YOU EARN
50 activations	~85	₦2,500
100 activations	~170	₦5,000
250 activations	~425	₦12,500
500 activations	~850	₦25,000

The hard part is the ₦500, not the ₦100. Once someone has funded, most go on to use it. Getting them to put money in for the first time is the real work – and it is the reason partners exist at all, because standing beside someone while they do it is the one thing an advert cannot do.

Your own Crowwe profile shows the gap: **how many used your code** against **how many activated**. Everyone in between is a person worth one phone call.

04 The tiers

One is live today. The second unlocks with volume. Be clear about which is which.

Tier 1 — Activation

LIVE NOW

₦50 per activated person

Paid once per person, for life, into your Crowwe wallet, automatically. Starts from your very first signup – there is no threshold to reach before Tier 1 begins paying.

Tier 2 — Transaction share

UNLOCKS AT 100

₦1 per qualifying transaction

Once you have **100 activated users**, you begin earning ₦1 on qualifying transactions from your territory. Unlike Tier 1, this recurs for as long as those people keep using Crowwe.

ACTIVATED USERS	AT ~10 TRANSACTIONS EACH PER MONTH	TIER 2 PER MONTH
100	1,000	₦1,000
250	2,500	₦2,500
500	5,000	₦5,000
1,000	10,000	₦10,000

Tier 2 is built but is not paying yet. Your activation counter is running and your progress toward 100 is tracked on your profile, but the per-transaction payments have not been switched on. Do not count on this income until Crowwe tells you it is live.

Ten transactions per user per month is an illustration, not a promise. Real volume depends entirely on how your people use Crowwe.

Tier 3 NOT SCHEDULED

A share of AI usage revenue was proposed and has been set aside. Too few people across the whole platform currently pay for AI for it to mean anything to a partner. It may return; treat it as absent.

05 Five rules that decide payment

Every one of these has cost someone a commission. None of them are negotiable.

RULE	WHY IT EXISTS
One payment per person, ever	You are paid for bringing someone in, not for their activity. Tier 2 is where activity pays.
Funding must come from outside Crowwe	Otherwise one wallet could be passed between accounts to manufacture activations.

Your code goes in before they fund	A referral rewards bringing someone new. An account that already has money in it cannot be claimed.
You cannot use your own code	A partner earns nothing on their own account or wallet.
One code per account, permanent	The first code applied to an account is the only one it will ever carry.

06 "Why wasn't I paid?"

The question this programme generates most, answered plainly.

They funded, but nothing happened	They have not transacted yet. Funding alone is a wallet, not a user. Ask them to send money, buy airtime, or withdraw.
They transacted, but nothing happened	They never funded ₦500 from outside Crowwe. Money someone sent them inside the app does not count.
They used my code and I earned nothing	Most likely they had already funded their wallet before the code was entered. That cannot be undone.
They funded twice — I only got ₦50	Correct. One payment per person, for life, not per deposit.
The code was refused at signup	Either it was mistyped, another code was already on that account, or the account had already been funded.
Two deposits of ₦300 didn't count	A single deposit has to reach ₦500. Two smaller ones do not add up to it.
